### 1 [Using Dynamic Binary Translation to Fuse Dependent Instructions](#)

Shiliang Hu, James E. Smith

March 2004 **Proceedings of the international symposium on Code generation and optimization: feedback-directed and runtime optimization CGO '04**

Publisher: IEEE Computer Society

Full text available:  pdf(240.50 KB) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

Instruction scheduling hardware can be simplified and easily pipelined if pairs of dependent instructions are fused so they share a single instruction scheduling slot. We study an implementation of the x86 ISA that dynamically translates x86 code to an underlying ISA that supports instruction fusing. A microarchitecture that is co-designed with the fused instruction set complements the implementation. In this paper, we focus on the dynamic binary translator for such a co-designed x86 virtual machine. The dy ...

### 2 [Dynamic translation: Dynamic binary translation for accumulator-oriented architectures](#)

Ho-Seop Kim, James E. Smith

March 2003 **Proceedings of the international symposium on Code generation and optimization: feedback-directed and runtime optimization CGO '03**

Publisher: IEEE Computer Society

Full text available:  pdf(1.13 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A dynamic binary translation system for a co-designed virtual machine is described and evaluated. The underlying hardware directly executes an accumulator-oriented instruction set that exposes instruction dependence chains (strands) to a distributed microarchitecture containing a simple instruction pipeline. To support conventional program binaries, a source instruction set (Alpha in our study) is dynamically translated to the target accumulator instruction set. The binary translator identifies ...

### 3 [Binary translation and architecture convergence issues for IBM system/390](#)

 Michael Gschwind, Kemal Ebcioğlu, Erik Altman, Sumedh Sathaye

May 2000 **Proceedings of the 14th international conference on Supercomputing**

Publisher: ACM Press

Full text available:  pdf(1.44 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We describe the design issues in an implementation of the ESA/390 architecture based on binary translation to a very long instruction word (VLIW) processor. During binary translation, complex ESA/390 instructions are decomposed into instruction "primitives"

**2 Binary translation and architecture convergence issues for IBM system/390** Michael Gschwind, Kemal Ebcioğlu, Erik Altman, Sumedh SathayeMay 2000 **Proceedings of the 14th international conference on Supercomputing**

Publisher: ACM Press

Full text available:  [pdf\(1.44 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We describe the design issues in an implementation of the ESA/390 architecture based on binary translation to a very long instruction word (VLIW) processor. During binary translation, complex ESA/390 instructions are decomposed into instruction "primitives" which are then scheduled onto a wide-issue machine. The aim is to achieve high instruction level parallelism due to the increased scheduling and optimization opportunities which can be exploited by binary translation software ...
